

GUIDE FOR TYPST POLYTECHNIQUE PACKAGE

A modern alternative to LaTeX

July 2024 - August 2024

RÉMI GERME

GUIDE CONTENT

| | |
|---|----------|
| 1 - Discovering Typst and the template | 3 |
| 1.1 - Headings | 3 |
| 1.2 - Cover page | 4 |
| 1.3 - Doing some math | 4 |
| 1.4 - Table of contents | 5 |
| 1.5 - Cite an article | 5 |
| 1.6 - Numbering pages | 5 |
| 1.7 - Dummy text with lorem | 6 |
| 2 - Modify the template | 7 |
| 2.1 - Contribute | 7 |
| Bibliography | 8 |

1 - DISCOVERING TYPST AND THE TEMPLATE

Typst rendering :

Typst is a user-friendlier alternative to LaTeX. Check out [this pdf source](#) to see how it was generated.

Source code :

```
Typst is a user-friendlier alternative to LaTeX. Check out #link("https://github.com/remigerme/typst-polytechnique/blob/main/guide.typ")[this pdf source] to see how it was generated.
```

1.1 - HEADINGS

Typst rendering :

1.1.1 • LEVEL 3 HEADING

Source code :

```
=== Level 3 heading
```

Use only one (resp. two) = for level 1 (resp. 2) heading (and so on).

Typst rendering :

• LEVEL 3 HEADING WITHOUT NUMBERING

1.1.1.1 - Level 4 heading

Source code :

```
#heading(level: 3, numbering: none)[Level 3 heading without numbering]
=== Level 4 heading
```

1.2 - COVER PAGE

```
// Defining variables for the cover page and PDF metadata
#let title = [guide for typst #linebreak() polytechnique package]
#let subtitle = "A modern alternative to LaTeX"
#let logo = none // instead of none set to "path/to/my-logo.png"
#let logo-horizontal = true // set to true if the logo is squared or horizontal, set to false
if not
#let short-title = "package guide"
#let authors = ("Rémi Germe")
#let date-start = datetime(year: 2024, month: 07, day: 05)
#let date-end = datetime(year: 2024, month: 08, day: 05)
#let despair-mode = false

#set text(lang: "en")
```

```
#template.cover.cover(title, author, date-start, date-end, subtitle: subtitle, logo: logo,
logo-horizontal: logo-horizontal)
```

Set text lang to fr if you want the months in French.

You can also specify short-month: true in the call to cover to get month abbreviations.

1.3 - DOING SOME MATH

Typst rendering :

Inline : $PV = nRT$ and $f : x \rightarrow \frac{1}{18}x^4, \forall x \in \mathbb{R}, f(x) \geq 0$.

Source code :

```
Inline : $P V = n R T$ and $f : x -> 1/18 x^4$, $forall x in RR, f(x) >= 0$.
```

Typst rendering :

Block (note space after opening \$ and before closing \$) :

$$f(b) = \sum_{k=0}^n \frac{(b-a)^k}{k!} f^{(k)}(a) + \int_a^b \frac{(b-t)^n}{n!} f^{(n+1)}(t) dt$$

Source code :

```
Block (note space after opening \$$ and before closing \$$) : $ f(b) = \sum_{(k=0)}^n (b-a)^k / k! f^{((k))}(a) + \int_a^b (b-t)^n / n! f^{((n+1))}(t) dif t $
```

1.4 - TABLE OF CONTENTS

You can generate a table of contents using `#outline()`. Here are useful parameters you can specify :

- indent
- depth
- title (put the title inside brackets : [title])

For example, the previous table of contents was generated using :

```
#outline(title: [Guide content], indent: 1em, depth: 2)
```

1.5 - CITE AN ARTICLE

Typst rendering :

You can cite an article, a book or something like [1]. Just see the `#bibliography` command below - you need a `.bib` file containing the bibliography.

Source code :

```
You can cite an article, a book or something like @example-turing. Just see the `#bibliography` command below - you need a `.bib` file containing the bibliography.
```

1.6 - NUMBERING PAGES

Useful commands to number pages (learn about [numbering patterns](#)) :

```
#set page(numbering: none)      // to disable page numbering
#set page(numbering: "1 / 1")  // or another numbering pattern
#counter(page).update(1)       // to reset the page counter to 1
```

Warning : put these instructions at the very beginning of a page, otherwise it will cause a pagebreak.

Typst rendering :

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua quaerat voluptatem. Ut enim aequaleamus.

Source code :

```
#lorem(25)
```

1.7 - DUMMY TEXT WITH LOREM

You can generate dummy text with the `#lorem(n)` command. For example : lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do.

2 - MODIFY THE TEMPLATE

2.1 - CONTRIBUTE

Contributions are welcomed ! Check out the [source repository](#).

You can also learn more about [Typst packages](#) release pipeline.
